B1: gets by

Strengths

Eager to learn

I enjoy continuous learning, developing my skills and discovering new stacks.

Ambitious

I aim high, I want to succeed everywhere and I give my all to each of my tasks.

Développeur full-stack

Hi, I'm 17, and I learned to code in Java when I was 8. I've gone through quite a few programming languages (C++, C#, Python, Skript) Now I'm a fullstack & blockchain developer and I'm looking to grow and realize my dreams.

Degrees and training

● Diplôme National du Brevet

De septembre 2020 à juillet 2021 [La Prairie](#) Toulouse

● Ethical Hacker

Depuis juillet 2021 [Udemy](#) Internet

I completed an ethical hacker training course on udemy, learning the basics of each area of cybersecurity.

Professional experiences

● Solidity Developer

De mars 2022 à juin 2022 [Loyal3Project](#) Toulouse

I created a smart contract ERC1155, which enabled Loyal3Project to sell clothes online, all via the blockchain.

● Fullstack & Solidity Developer

Depuis avril 2024 [Ennea](#) Toulouse

I currently work for Ennea and create smart contracts, apps and dApps using all types of stacks. I've built several applications, and worked mostly on a web3 game, doing a lot of NFT collection and connecting to frontend and backend infrastructure. I work 100% with Next in typescript, so I'm fully operational with this kind of stack. (<https://ennea.dev/>).

● Fullstack & Solidity Developer

D'octobre 2022 à septembre 2023 [AITERNAITE](#) Toulouse

I worked for AITERNAITE as a freelancer for a few years developing web interfaces, solid backends, smart contracts, and solana applications.

Skills

Python

I also develop with python, particularly in basic artificial intelligence with pytorch. I also develop basic applications and games.

Solidity

I learned solidity at 14-15 as an autodidact and I now have 3 years of professional experience as a solidity developer on all types of projects (defi, nft, services, lottery, games...).

Backend

I trained as a backend developer 3 years ago, and can build backend infrastructures with express.js as well as next.js. I know AWS, Firebase, Supabase, SQL relational database, as well as several ORMs (Sequelize, Prisma). I work with javascript but especially typescript.

Frontend

I trained as a frontend developer 3 years ago and now master ReactJS, NextJS, Typescript, and all types of javascript frontend applications running on nodeJS. I know how to use bootstrap, but I mainly use tailwindcss as a css framework.

dApps

I create any dApps on EVM, starting with the development of the smart contract and ending with the connection to the frontend using any type of library (viem, wagmi, ethers.js, web3.js, rainbowkit, magicWallet, etc.).

NodeJS

I'm fully proficient in nodeJS, with 3-4 years of professional experience, creating all types of scripts.

Applications

OnCom

I developed a web3 social network similar to discord (with permissions, roles, lounges, servers, friends, messages, etc.) content with web3 features like crypto exchange, secure wallet connection and many others (code available on github). (<https://onccom.xyz>)

Dowgo

During my time at Ennea, I developed Dowgo on my own, an application for tracing transactions using blockchain. I used several libraries (DFNS, Monerium) to connect users' identities to their wallet (<https://www.dowgo.com/>).
